

## Snap Fastener Machine

# Model MS10

The Rome Fastener Corp. **Model MS10** is a fully automatic attaching machine tooled for snap fastener components, and rivets. This machine is suited for customers who require an affordable, reliable solution for snap fastener applications. The Model MS10 is a servo powered machine and features rotary hoppers, a target light for locating the snap position on the material, and an integrated safety mechanism. The use of the servo drive eliminates service headaches as there are fewer moving parts in the transmission. The machine weighs about 100 lbs less than our MS4 machine so it can be moved on the shop floor more easily.
